

Why iRise?

Enterprise visualization from iRise is now the standard for how forward-thinking companies define business software. Here's why:

Fully Immersive Visualization

iRise is the only product on the market that gives stakeholders the ability to fully experience the look, feel and behavior of all kinds of software before coding. Partial experience, prototyping or wire frames are just not good enough. iRise visualizations support rich behaviors, are data aware and contain business logic; in other words, they are indistinguishable from the final product. iRise can be used to visualize Web applications, desktop systems, packaged solutions like SAP or ORACLE, mobile devices and even mainframe screens.

Proven Customer Success

With thousands of successful projects under their belts, our customers are speaking out about the benefits of visualization. Companies of all sizes across a broad range of industries are getting software projects delivered twice as fast with 30% less cost.

Enterprise Grade

Only iRise provides a secure real-time collaboration platform for application definition professionals and their stakeholders. Enterprise grade features like comprehensive comments management, shared reusable content, open APIs for downstream integrations, pre-configured content solutions and enterprise security are powerful combinations with the iRise ecosystem of support for enterprises that are serious about transforming the way they deliver software.

World-Class Support

The iRise Support team is unmatched in their responsiveness and product knowledge. And they're available live via the Support hotline; not just through email or online blogs.

People, Process, Technology

The iRise Professional Services team has helped our customers on hundreds of projects across many different industries. No other company has the ability to deliver enterprise visualization best practices gained from this extensive experience. Whether it's delivering training and mentoring, building an adoption plan, establishing a Center of Excellence, augmenting staff or building simulations for our clients, the iRise services team stands ready to accelerate adoption and support mission critical projects.

Collaboration

Only iRise has real time collaboration for visualization authors and reviewers, which is essential for globally dispersed workforces.

Content Solutions

Only iRise has libraries of pre-configured visualization content for SAP, IBM and the iPhone and iPad, which speeds time to visualization and shortens overall project cycles.

Requirements in Context

Only iRise has patented capabilities to document and associate text requirements in context of visual elements of interactive visualization. This gives organizations a powerful way to build a complete visual and textual record for what to build.

Why iRise?

Our Customers; In Their Own Words

"CompuCredit's challenge was to continue providing a high level of service for customers and introduce an easy-to-use portal for valued card holders. We're in a highly competitive market and getting to market fast is imperative. Application simulation is leaps and bounds more efficient than cobbling together text, static screen shots and flow diagrams to envision new applications.

iRise does for our development team what spreadsheets did for finance ages ago – it gives us the flexibility to rapidly test different scenarios and take the risk and guesswork out of projects."

Guido Sacchi
CIO
CompuCredit

"iRise shaves off months of suspense. Application simulation removes the uncertainty from the development process and affords us additional leverage to create a more descriptive, enforceable, and traceable project contract with the outsourcing developer. This improves the quality of our execution, accelerates project resolution, and ensures strong management of our outsourcers."

Wing K. Lee
Director of IT Strategy & Research
Sprint

"Applying this expertise to visual modeling of software enables GM to deliver increasingly collaborative, innovative and user-centric products to our employees and customers. We are glad to be working with a strong ecosystem of partners to standardize IT visual modeling across our enterprise and the industry."

Fred Killeen,
Chief Systems & Technology Officer
General Motors

"Interactive, immersive software visualization is an important component to solving the endemic problem with requirements on software projects. iRise is the market leader with this capability, having proven the benefits of visualization across a broad set of industries and application types."

Michael Loria
Vice President of Business Development
IBM Rational Software

"With our team members spread around the globe, we simply couldn't get consensus fast enough without the iRise platform. Visualization allows us not only to move faster, but to cut significant cost out of these projects by giving our business analysts the ability to drive high quality requirements to the rest of the team early in the process."

Shawn Smith
Vice President of Global IT
Carlson Wagonlit Travel

"iRise is a critical part of our strategy to improve product quality and gain competitive advantage in an industry that is undergoing incredible transformation"

"The single biggest issue with delivering software is communications. The greatest leverage that iRise enables is improving communications at the front-end of the process, which will help us eliminate rework and speed delivery."

Jim Atteberry
CEO
HealthMEDX

"Fast innovation."

Dave Barnes
Global CIO
UPS
