

iRise Connect for IBM Rational®

Visual Definition Integrated With Requirements Management

iRise Connect for IBM Rational® is a comprehensive integration that gives IBM customers a unique advantage in their application development projects. The combination of iRise application simulation and sophisticated requirements management forms a complete solution for getting requirements right and then successfully managing them through the development and delivery phases of business application projects. As a result, innovation is delivered to market faster, with less risk of rework and delays due to miscommunication.

iRise Connect ensures requirements captured and visually articulated in iRise Studio are kept in sync as the product lifecycle transitions from requirements definition to requirements management. Real-time integration ensures momentum is not lost as requirements are made available and managed throughout the balance of the software development process.

Key capabilities of iRise Connect for IBM Rational:

- Server-to-server synchronization
- Requirements authored, modified or deleted in IBM are synchronized with requirements in iRise
- Requirements authored, modified or deleted in iRise Studio are synchronized with requirements in RequisitePro
- Requirements attribution is visible in both iRise and IBM
- Hyperlinks are available from IBM environment to specific simulation pages in iRise

Benefits Include:

- Employ a visual and interactive approach to application definition as the front end of the IBM Rational development process
- Ensure the requirements being managed are the “right” requirements
- Eliminate re-keying of requirements between platforms
- Guarantee that requirements don’t fall through the cracks between definition and management
- Communicate concepts unambiguously by providing links associating requirements being managed to working simulations
